

PERFECT PIPE A SUSTAINABLE REVOLUTION.

CONCRETE-HDPE COMPOSITE PIPE FOR A LEAKPROOF LONG LIFE

Perfect Pipe is revolutionizing wastewater systems. The concrete-HDPE composite pipe lined with the Perfect Liner provides a proven long service life with easy install and maintenance, resulting in long-term savings.

LONG SERVICE LIFE

More than 100 years of service life due to corrosion resistance and high abrasion resistance of HDPE liners. No age-related decline in pressure when used in suitable conditions.

COMPLETELY LEAKPROOF

Liner covers interior 100% and is anchored into concrete with 56-pound pull-out resistance and provides a smooth finish and even flow at 36 psi.

NO FIELD WELDING

Joint requires no field welding. The Perfect Connector provides a smooth laminar flow, a tight seal, and flexibility from pipe to pipe.

LOW MAINTENANCE

Easy inspections with a clean, bright view and clear joint location. Even after decades of use, the interior remains unchanged. No deformation measurement is necessary.

FLEXIBLE IN ALL APPLICATIONS

Proven in traditional sewers, trenchless projects, deep installation, and high water table applications. Can be used in conjunction with any pipe system.

SUSTAINABLE MATERIALS

Even after years of use, all Perfect Pipe materials remain recyclable.

QUALITY MANUFACTURING

Manufactured in the United States with patented Perfect Pipe technology.

COMPLETE SEWER SYSTEM SOLUTION

Equipped with the liner material used in over two million successful installations in Europe, the Perfect Lined Manhole is now manufactured in the United States by Geneva. Compatible with any sewer system, the Perfect Lined Manhole provides long-term service in any environment.

100% lined manhole provides corrosion and abrasion resistance

Liner anchored into concrete for life-cycle expectancy of 100+ years

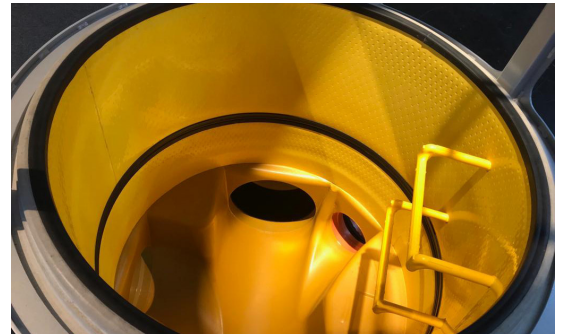

Proven chemically resistant to raw sewer

No field joint welds required

Gasketed joints available for infiltration and exfiltration protection

Monolithic base manufactured in one pour eliminates cold joints

Custom invert channels accommodate any pipe configuration or size
